AdaptBC
for Analytics

Jet Analytics for Microsoft Dynamics 365
Business Central Adapter

Analytics Without Limitations

Full access to all your data in Microsoft Dynamics 365 Business Central for fast, complete, and customized analytics without the need for technical resources.

Transform Jet Analytics for Business Central into the unrestricted data warehouse and business intelligence solution it's built to be.

- Integrate all your tables, fields, customizations, and third-party ISV data
- Create unlimited custom queries without the need for a Business Central developer
- Both Business Central Full Users and Team Members can access, build, or run business dashboards and reports
- Compatible with both Business Central Essentials and Premium cloud and on-premise deployments
- Build any query, cube, dashboard, or report you need

Why do I need AdaptBC for Analytics?

Business Central, especially when deployed in the Microsoft Azure cloud, presents some data challenges for third-party analytics and reporting applications like Jet Analytics. Out-of-the-box, these solutions will come with significant limitations that will prevent you from getting the full business visibility you need and expect from your analytics and ERP investment.

Cubes and queries are pre-defined and static, connectivity is slow, additional queries and customizations require a developer, access to integrating customized fields or add-on data is restricted, standard analytics aren't compatible with Business Central Essentials or all user license types, and queries are not localized for regional Business Central deployments.

The AdaptBC Analytics for Change

- **No limitations:** Analytics adaptation that will work with any localized version, customization, license type, and Business Central version.
- **Decreased costs:** No developer or technical resource required to report on any data you need from Business Central.
- **Fast answers:** Removes the traditionally sluggish data connectivity to Business Central to deliver the fast reporting time you expect.
- **Uninterrupted upgrades:** Seamlessly transition your reporting and analytics during your upgrade from NAV to Business Central, and in all future updates to come.

Dynamic Business Central → AdaptBC for Analytics → Jet Data Manager → Jet DWH → Presentation Layer / Jet Cubes
