

## Ultimate Emergency Connectivity

Carbyne is the global innovation leader in public safety technology. Our platform unifies the flow of life-saving information (live video, instant chat, dynamic location, and more) to emergency call centers (ECC) onto one simple solution. Carbyne's platform can be deployed immediately and seamlessly to remotely monitor and track CoronaVirus patients, as well as those quarantined, thus reducing the risk of exposure and minimizing the spreading of the virus.

# Coronavirus Solution

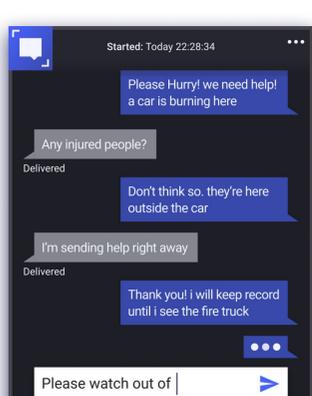

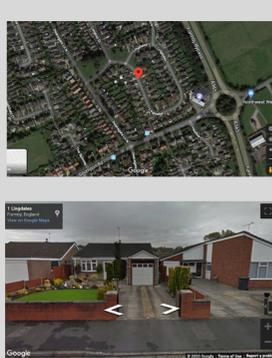

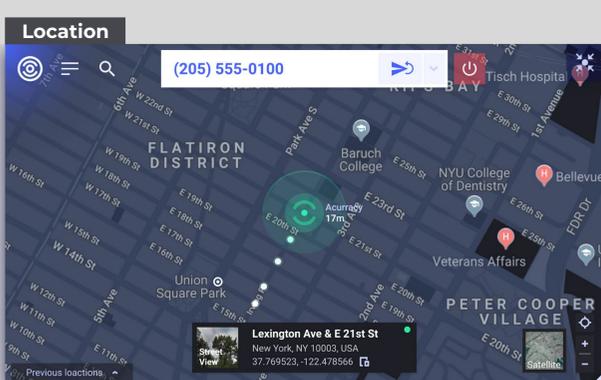

## 1. Video Screening

In 2019, over 60,000 live video sessions were created between ECCs and citizens using Carbyne's platform. Live video screening is a powerful tool to screen patients and examine vital signs of CoronaVirus symptoms, thus reducing human interactions. Carbyne's video sessions are not restricted to any part of the country and can easily be initiated by the authorities and instantly accepted by the citizens.

## 2. LOCATION MONITORING

Carbyne is the world's largest provider of emergency location services. Carbyne's platform currently covers 210,000,000 people globally and provides over 20,000,000 location requests a year. To support the monitoring of CoronaVirus patients, Carbyne can provide authorities instant and accurate patient location to ensure that the individuals are remaining in their designated area. Authorities can view locations in map view, earth view, and street view. In addition, Carbyne's dynamic location service can provide live tracking while patients are on the move to ensure they are following authorities' guidelines. All tracking mechanisms are with the approval of the citizens.

## 3. Effective Communications

Through Carbyne, over 90,000 instant chats (via WhatsApp or text) were created between citizens and ECCs in 2019. As part of the CoronaVirus monitoring efforts, instant chats can be an effective tool to communicate with sick patients who can not communicate or to overcome the sound barriers that face masks create in phone conversations.

## 4. Instant Implementation

- 📍 Sits on top of your current system
- 📍 Zero dependency on current systems
- 📍 Seamless Integration
- 📍 Effortless installation
- 📍 Risk Free - Current methods of operation will still be valid
- 📍 Fully customized and flexible user interface capabilities

## 5. Citizen Privacy

Communications through Carbyne's platform are always initiated by the ECC and each session is independently approved by the citizen. At no point is information accessed without user approval. When a session is terminated, so is Carbyne's access to that callers' mobile device. Carbyne is merely a gateway for communications that allows ECC to truly connect to the citizens.
