Luna XIO

Asset Tracking. Made Easy.

The Need for Asset Tracking

Track high-value assets

Expedite order fulfillment

Harness business intelligence

Enhance inventory management

Streamline supply chain operations

Elevate patient care and profitability

The Solution: Luna XIO

No additional infrastructure required

Turns existing Android and iOS Bluetooth-enabled devices into gateways.

The right tracker for the right asset

Works with nearly all Bluetooth-enabled devices and tags.

No wires required

Long-life battery-powered anchors/beacons can provide even greater accuracy.

Fast Set-Up

System rollout is hassle-free and takes days rather than months.

Simple & Reliable Asset Tracking

- **Lowers operational expenses:** Find assets quickly and easily
- **See all assets on one screen:** Multi-vendor data feeds into a single system
- **No downtime:** Basic set-up in less than a week
- **Minimal training required:** Similar to Apple's 'Find My' feature
- **Faster ROI:** Leveraging existing infrastructure makes Luna asset tracking very affordable
- **Seamless Integration:** Easily integrates into existing systems, ie: WMS or Quality systems

Luna Tracker Features
Enterprise visibility

Global deployment through Luna cloud network. See all tracked assets from a central location.

Strengthened network

Strengthens your network/mesh by leveraging existing equipment, including iOS and Android devices.

Location anchors

Rich views with existing or additional beacons as location anchors.

Enhanced productivity

Associates can be alerted and/or use proximity reports when looking for an asset.

Simple Set Up

1

Download Luna Locate app from app stores. Roll it out to Android and iOS devices, mobile computers, and scanners via your MDM.

2

Luna app transforms mobile devices into gateways. Any BLE beacon can serve as a location anchor.
3

Choose the best-suited trackers/sensors for your application. Luna will provide the firmware to establish a secure zero-touch, zero-trust communications channel.

4

Gateway-enabled mobile devices receive data from IoT sensors, and provide real-time location data to the Luna XIO system.

5

View device locations, perform actions, and conduct asset audits through user-friendly mobile and desktop apps.

6

Customized dashboards and analytics enhance device visibility and operational efficiency.
