smartbus™

The #1 School Bus WiFi Solution

| CRITICAL REQUIREMENTS	To ensure that your solution effectively supports the requirements for School Bus Wi-Fi, it may be helpful to confirm that any solution you contemplate includes the following:
Wireless Connectivity	eSIM Support; Best network guaranteed with each device provisioned with at least two cellular carriers; Active-Active capable; Unlimited data without overages.
Filtering and Security	Embedded CIPA compliant filtering for all devices attached to the Wi-Fi network. Support for latest security threats, proxies, inappropriate content, and social media. AI-based security firewall. Custom filters assignable by time of day, route, and grade.
Hardware	Ruggedized hardware with an operating temperature range of -30 °C to 70 °C. Support for various use cases ranging from 5 to 85 student connections.
Contracting	Multi-year contract availability (flexibility of 1 to 5-year terms).
Care and Management	Web-based platform for real-time reporting of device and data usage, including daily ridership, signal quality. 24/7/365 technical support. Ability to limit service to district issued and approved devices.
Installation	Harnesses and conversion kit availability. Installation capabilities, with non-permanent options for leased fleets.
