

Our History

- For over 20 years, LabKey has provided scientific data management solutions to research organizations worldwide.
- From our initial focus on proteomics research to now offering a range of scientific software, our applications are used worldwide by scientists in a variety of research settings.
- Our partnerships with scientists and researchers has been a critical component of ensuring that our products remain on the cutting edge of scientific software solutions.

Our Approach

- Our proven approach to partnering helps you realize the early “wins” that lay the foundation for successful implementation and system adoption within your organization.
- LabKey Account Managers learn about your use case, challenges and goals so that we can fully support your organization with our expertise and hands-on support.
- Your feedback and input while working with us plays a critical role in shaping the features and future of our products.

Our Expertise

- More than a software company, LabKey is a science company. Our Support Team includes scientists and researchers with expertise in data management.
- Our deep knowledge of best practices for managing scientific data has been developed by working with a variety of researchers in academia, pharma/biotech and government.
- Our engineering team has decades of experience in building scientific software that is stable, secure and scalable.
