

IT KONNECTS EVERYTHING

Validation & Verification process is powered by a software solution for biometrics to ensure the legal age requirement is approved prior to use. Upon approval, the power management system is activated ready for consumption.

Human Factor Engineering is achieved by Ispire conducting rigorous research, development & physical market testing to ensure an easy to use device, reliability and stability.

Berify provides robust security framework by utilizing blockchain technology combined with a physical NFC/RFID Tag. This stable foundation protects from penetration while allowing immutability & interoperability.

NFC/BLE Enabled combines innovative device power-management to activate consumer engagement for authentication, age verification, rewards & exclusive access.

Numerous Problems surround devices due the inability to verify the end user and its origin to ensure the product is genuine for safe consumption.

Golden Standard Solution generated by IKE's Berify & Ispire development instills confidence and innovation into the global market by combining blockchain technology, age-verification & consumer experience through a NFC/BLE tag.
