

A versatile solution that can benefit almost every patient, every day.

The Solea® All-Tissue Laser is a comprehensive dental practice solution unlike any other. This 9.3-micron CO₂ laser allows for anesthesia-free, blood-free, and pain-free procedures in hard and soft tissue.¹ Convergent Dental unites this novel technology with our unique success support community, enabling dentists to elevate and grow their practices through improved efficiency, patient experience, clinical effectiveness, and procedural expansion.²

"With Solea, my patients get to experience anesthesia-free restorative dentistry, which means no shots! Patients are also able to get multiple procedures done within one visit, which means less time missed from school. What's more, soft tissue procedures heal so much faster, and there's less post-op discomfort. The best part of using Solea is that the kids leave happy, like nothing happened! Game changer!"

— Andrea Gamble, DDS, Pediatric Dentist

SOLEA® ELEVATES PRACTICE POSSIBILITIES

What if you could eliminate dental anxiety for many of your patients? And what if you could perform more same-day, multi-quadrant dentistry? That is what anesthesia-free, blood-free, and pain-free procedures can do. Less blood, sweat and tears - more smiles, efficiency, and revenue for your practice.

And what if you could perform procedures that you previously ignored or referred out? Solea® dentists perform new soft tissue procedures because they are simple, fast, and minimally invasive.² When you can greatly reduce or eliminate bleeding, sutures, and post-operative pain, you can add higher revenue procedures such as gingivectomies, frenectomies, canine uncoveries, and fibroma removal.

Your patients will love receiving treatment from a dentist they know and trust.¹

» Patient Experience

New patient growth, dramatic reduction in patient attrition, and higher rates of treatment acceptance.²

» Procedural Expansion

Refer less and add new, higher revenue procedures.

» Clinical Effectiveness

Improved outcomes with minimal bleeding, little to no post-op discomfort and remarkably rapid healing.²

» Practice Efficiencies

Treat a cavity the same day it is found in hygiene and perform more same-day, multi-quadrant dentistry.
