Axiom for **Artificial Intelligence**

Axiom matches you with the right world–class legal talent so you can better manage the unique challenges and complexities presented when developing, incorporating, or utilizing artificial intelligence.

9 of the 10
largest technology companies in the world are Axiom clients

200+
lawyers in our global network with artificial intelligence (AI) & machine learning (ML) advice and counsel experience

1,400+
technology engagements over the last 5 years

What We're Hearing

AI is rapidly changing the legal landscape, leaving in-house teams facing both incredible opportunities and significant challenges. From navigating relevant regulations and new questions about ownership of AI-generated works, to issues related to social responsibility, including ethics, fairness, and removing bias in algorithms - *the need for lawyers with AI legal experience is growing.*

How We're Helping

To keep up, the leading companies in the world are engaging with Axiom lawyers experienced in counseling clients on managing AI to get effective, efficient support at affordable rates. Whether you need a single secondee or a team of talented lawyers and paralegals - our support can be tailored to meet your artificial intelligence-related legal needs.

Our clients want technical experience combined with pragmatic, business-oriented advice. Axiom lawyers have seen AI develop rapidly, are at the forefront of change, and can help with a wide-range of artificial intelligence-related legal needs. A sample of popular engagement types you could think of us for, include:

- **AI/ ML compliance program design and implementation**, including policies, procedures, compliance auditing, and training

- **Regulatory assessments and ongoing regulatory landscape analysis**, including the EU AI Act, US AI Accountability Act, CA AI and Data Act (AIDA), and the AI Risk Management Framework

- **Review of algorithmic bias** – hiring and screening process, algorithmic collusion, biometrics, disclosure, and tracking obligations, including conflicts and code of ethics

- **Evaluation of AI impacts for patents, copyrights, and trademarks**, including reviewing ownership of AI-generated works, including infringement and right-of-use issues, and assessing the use of data to train generative AI models

- **Management of data** governance, privacy and online monitoring, data privacy issues on a global scale, and ensuring compliance

- **Identification and assessment of legal and regulatory issues during product development and launch**, including competition, privacy, intellectual property, international and regional issues, and law enforcement

Axiom Lawyers with AI Experience

ABBIE

> **Legal Practice Area:** Data Privacy & Cybersecurity
> **Experience Level:** Junior
> Health services attorney specializing in data privacy and information technology, with a proven track record as Associate General Counsel at a prominent healthcare organization. Experience developing the organizational AI policy and skillfully navigating intricate negotiations for AI product contracts encompassing dictation devices, chatbots, and more.
