SKY HIGH SILVER AHEAD

The silver market is on the verge of something big

By John Rubino

Lear Capital Global Financial Research Specialist

IN THIS REPORT WE COVER:

Why silver is an important industrial metal	Page 3
How it can help hedge inflation	Page 4
How scarce silver really is	Page 4
Why Own It Now?	Page 5
How High Can It Go?	Page 6

For all references, see page 7.

The silver market is on the verge of something big, with a compelling story that spans multiple facets of both industry and finance.

This report dives into why silver is not only essential in the modern technological world but also presents a unique opportunity for investors looking to protect their wealth and capitalize on market trends.

From its indispensable role in cutting-edge industries to its historic reputation as a hedge against inflation, silver is a metal that demands attention.

But that's not all. This report also reveals a looming supply crunch that could reshape the silver market and lead to significant price increases. And with silver still lagging behind gold's record-setting high of \$3,500, the potential for dramatic gains is real. Read on to discover why some experts are calling silver one of the most undervalued assets of our time and what that could mean for you.

It's an Important Industrial Metal

Silver is conductive, reflective, and durable, which makes it crucial for everything from circuit boards to smartphones to solar panels. As the [Silver Institute trade group notes](#),¹ “Silver is found in virtually every electronic device with an on/off button or through which an electric current flows.” Photovoltaic (PV) solar panels alone now consume nearly one-third of the silver produced by today’s mines.

Global Silver Industrial Demand

It's an Inflation Hedge

Silver is a form of money that becomes more valuable during times of rising inflation. During the financial crises of the 1970s and 2000s, for instance, it outperformed virtually everything else.

As global governments continue to borrow at unprecedented levels, the likelihood of rising inflation and potential financial crises becomes more certain. Given this trajectory, silver could once again prove its worth as a valuable inflation hedge.

The World is Running Out of it

Humanity uses more silver each year than it produces, and the gap appears to be persistent and growing. A [recent study found²](#) that solar demand alone could consume 85% of global silver reserves by 2050.

Why Own It Now?

It's Cheap Compared to Gold

The number of silver ounces it takes to buy an ounce of gold (known as the gold/silver ratio) normally fluctuates between 40 and 90. Right now it's around 100, which implies that silver is a bargain relative to gold.

It's Starting to Move

After languishing for several years in the \$25/oz range, silver has risen into the \$30s. But unlike gold, which is hitting new all-time highs, silver is still far below its peak of \$50/oz. In other words, it has a long way to run.

How High Can It Go?

For a sense of how high silver can go, assume that gold rises to \$4,200/oz, as some [analysts now predict](#)³. If the gold/silver ratio drops to 40 during that time, silver **would soar to \$105.00/oz, about three times its current price**. That's why some analysts call it "the most undervalued asset on the planet."

About the author

John Rubino is a former Wall Street financial analyst and author or co-author of five books, including *The Money Bubble: What to Do Before It Pops* and *Clean Money: Picking Winners in the Green-Tech Boom*. He founded the popular financial website [DollarCollapse.com](#) in 2004, sold it in 2022, and now publishes John Rubino's Substack newsletter.
