

Deliver Secure, Scalable Remote Desktops to Your Clients

Our OpenCloud Desktop-as-a-Service platform enables MSPs to offer fully managed, secure virtual desktops that support remote work, reduce client infrastructure costs, and scale effortlessly. Backed by enterprise-grade security and simplified management, it's the ideal solution to expand your service portfolio and increase recurring revenue.

Secure Remote Access

- Empower employees to work from anywhere without compromising security
- Ensure secure access to desktops, apps, and data across devices and geographies
- Built-in compliance support for industries like healthcare, finance, and government

Cost Efficiency & Operational Simplicity

- Eliminate the need for costly physical desktop infrastructure
- Reduce IT overhead with centralized management and automation
- Flexible pricing models that scale with your business

Scalability for Dynamic Business Needs

- Quickly provision or decommission desktops based on changing workforce needs
- Support growth, M&A activity, seasonal fluctuations, or remote onboarding
- Easily scale across departments or clients (multi-tenant for MSPs)

Enhanced Security & Compliance

- Built-in encryption, access controls, and user authentication
- Isolated environments for sensitive data and regulated industries
- Regular updates and patches to ensure system integrity

Partner-Ready for Service Providers

- White-label and multi-tenant features to support client isolation and branding
- Easy integration with existing MSP services and toolsets
- Drive recurring revenue while minimizing management burden

The Workforce Has Changed. Has Your Desktop Strategy?

Today's business landscape demands flexibility, speed, and security. US Signal's OpenCloud Desktop-as-a-Service (DaaS) solution helps your organization:

- Support remote and hybrid work
- Control IT costs and complexity
- Stay secure and compliant
- Scale easily—without new hardware

Offer the freedom to work from anywhere, the efficiency to drive savings, and the flexibility to grow—securely and profitably.

All available on US Signal's OpenCloud

US Signal OpenCloud is a next-generation cloud platform that delivers the scalability and flexibility of public cloud with the performance, security, and control of private infrastructure. Built on the strength of Apache CloudStack, OpenCloud provides a powerful alternative to legacy virtualization platforms, giving you greater freedom in how you deploy and manage your IT resources.
