

Remote, Active Freight Theft Prevention

TrailerSentry is a next-generation trailer security system with active theft prevention, mobile brakes locking, instant alerts, and GPS tracking. By preventing theft before it happens, TrailerSentry saves time, money, and headaches—making trailers smarter and safer.

I Refuse to Roll

I electronically lock the trailer's brakes.
No authorization, no go.

Stops trailers from being stolen.

Not later.
Not after paperwork.
At the moment someone tries.

I Speak Up Immediately

Tampering, hookups, or movement trigger instant alerts.

Most security watches theft happen.

TrailerSentry doesn't - it actively stops theft before it can even start.

I Remember Where I Am

If I'm moved, my location is visible in real time.

TrailerSentry stops theft before it starts.

Problem Awareness

Chains, wheel locks, and alarms can't stop thieves—they only react after the loss.

TrailerSentry prevents theft at the moment it happens, making reactive security obsolete.

Active Immobilization

TrailerSentry's electronic brake lock acts the moment a trailer is tampered with.

No manual locks, no delays—just immediate protection.

Real-Time Alerts

Tampering? Unauthorized access?

TrailerSentry sends instant notifications to operators so they can intervene immediately.

GPS Tracking & Recovery

TrailerSentry's GPS tracking ensures your trailers aren't just protected—they're always locatable.

Prevention + recovery = total peace of mind.

AUTOVENTIONS

Built on data. Proven in motion.

Efficiency, Intelligence, and Active Freight Theft Prevention

AutoVentions is a technology company delivering proven efficiency, intelligence, and active freight theft prevention solutions for commercial transportation.

Built on rigorous R&D and validated through independent testing and real-world fleet deployment, AutoVentions technologies reduce fuel waste, lower emissions, and protect cargo where losses most often occur.

Our flagship platform, Trailer Sentry, transforms trailers into connected, data-driven assets by providing real-time visibility, behavioral intelligence, and actionable alerts—enabling fleets to prevent theft, improve utilization, and operate with confidence at scale.

TrailerSentry

A Bluetooth-enabled, app-controlled device that locks trailer brakes to prevent cargo theft, easily installed in less than 20 minutes.

Cobra Clean

An industrial-strength degreaser for automotive and commercial use.

GasMaxx/DieselMaxx

A fuel enhancement system designed to improve engine performance and reduce emissions by up to 80%.

Installation Kits

Autoventions provides specialized kits to install our products, designed for various engine types.

Independently tested and validated

Proven in real customer fleet operations

Designed for scalable, enterprise deployment
