

TrackAssure by Ladle

Mobile Traceability & Audit Execution for Multi-Location Operations

KNOW WHAT HAPPENED. PROVE YOU WERE READY. KEEP OPERATIONS MOVING.

What is TrackAssure? TrackAssure is a mobile execution and traceability platform that helps multi-location foodservice and retail operators capture lot-level product data at receiving, prep, and transformation — monitor critical control points, document corrective actions, and generate FSMA 204-aligned audit records automatically, as part of normal daily operations. When a recall hits or an inspector walks in, your records are already there. One tap. Complete. Ready to prove you were ready.

PLATFORM CAPABILITIES

Act on Issues Before They Become Incidents

Real-time dashboards and automated alerts surface incomplete receiving logs and flagged lot numbers before they create audit exposure or customer risk. When a known recall hits, you already know if you're affected. No scrambling.

Document, Prove & Avoid Cost

FSMA 204-aligned traceability records are captured automatically as part of daily operations. Corrective action documentation and one-tap audit report export mean you can meet the 24-hour response requirement without breaking a sweat.

Keep Operations Moving

Compliance can't come at the cost of throughput. TrackAssure is built for field adoption: guided mobile workflows, under-a-shift onboarding, and seamless integration with existing Ladle platform data. Scales from one location to hundreds. TrackAssure also integrates with GSI to support barcode generation, enabling organizations to create and scan GSI-128 barcodes as part of the receiving workflow.

WHO IT'S FOR

Operations Leadership

System-wide compliance visibility and the evidence to back it up when it counts.

Food Safety & QA

Reliable, automated traceability that captures FSMA 204-required data as a byproduct of normal daily operations.

Unit / GM Teams

Your team logs what they're already doing. TrackAssure builds the compliance record automatically.

PART OF THE LADLE PLATFORM

Digital Checklists

Configurable HACCP and operational checklists that ensure food safety and brand standards are met consistently across every location. Real-time dashboards give operations teams visibility into completion and compliance at a glance.

Audit Readiness

Field audit tools that help multi-location operators identify gaps, document findings, and drive corrective action across their entire portfolio. See how every location stacks up and get ahead of issues before they surface in a third-party inspection.

Continuous Temperature Monitoring (CTM)

Automated sensor-based temperature monitoring that captures readings every 10 minutes across cold storage equipment. Configurable alerts notify the right people the moment a threshold is breached, protecting product quality and reducing the risk of costly discards.

Together, these solutions give operators a complete digital foundation for food safety, operational execution, and traceability. One platform. Every shift. Every location.
