

APOLLO Mobile Telemedicine Clinic

Bringing complete clinic capability closer to the fight.

APOLLO is designed to bring the full capabilities of a geographically distributed medical team closer to the battlefield and the injured. APOLLO provides a fully-equipped, deployable unit with real-time, secure communications to multiple medical locations and live streaming of medical device data.

APOLLO is fully furnished with rooms for triage, exams and minor surgery, all equipped with digiMed Five Plus Telemedicine Kit. Solar panels provide primary power, reducing the need for fuel as part of the deployment & sustainment package. APOLLO's mission-specific, scalable design allows it to be tailored for available transport from a one Shipping Container variant to a single truck-deployable variant.

FENIX GROUP, INC.
