# Demystify & Automate SOC 2 Certification

The Challenge

Given increased regulations and greater frequency of cyber attacks, customers are requiring their vendors to prove they are secure by providing third-party attestation of their security policies and controls through certifications such as **SOC 2 Type 1 & 2**. The certification process can be confusing, time-consuming and costly exercises for organizations to complete.

Demystifying & Automating Certification

Tugboat Logic can help demystify this process so you have a clear roadmap to certification, as well as automate the process so you can complete your SOC 2 quickly, confidently and cost-effectively.
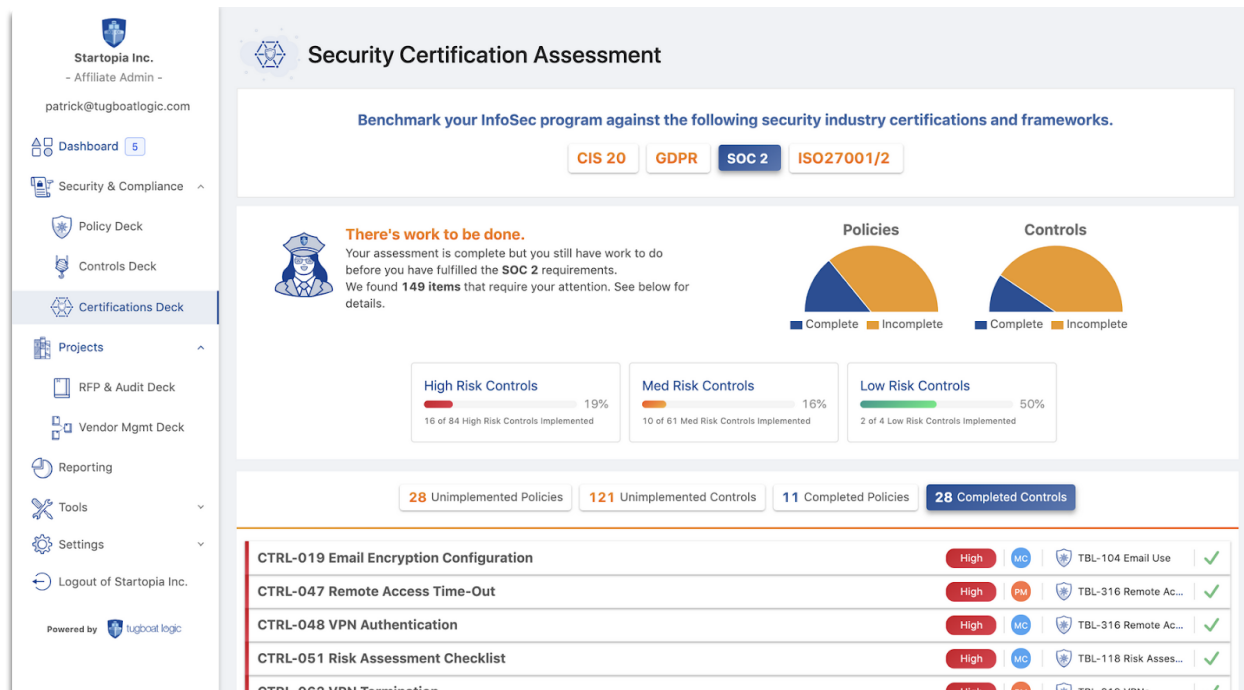

Benefits of Tugboat Logic

Tugboat Logic has helped many organizations scale their InfoSec program, reduce certification costs and win more customers. Here are some of the tangible benefits our clients have achieved:

60%

Reduction in certification readiness costs

3x

Improvement in sales win rate

Tugboat Logic is an **existential necessity** for my business. They helped us **prove compliance** and in the process unlocked key wins for our business.

Carlos Garcia | CEO

HYP3R

How it Works

Tugboat Logic has **prebuilt policies and controls** (with implementation guidance) that are mapped against popular industry frameworks such as SOC 2 Type 1 and Type 2**,** so organizations can instantly **visualize gaps** in their security program, assign and **track implementation** of missing controls, and provide **evidentiary proof** to auditors and clients alike that they are in compliance with these frameworks.

As an evergreen InfoSec program system of record, organizations can then **leverage** the work they completed for one certification to achieve other certifications, and to easily manage renewals of their existing certifications.

In addition, Tugboat Logic has partnered with a well-respected accredited CPA firm, Skoda Minotti, to complete the audit once you complete your certification readiness, so you can have an **official third party certification** to share with your clients at the end of the project. Below is a diagram of the three main phases of SOC 2 Type 1 certification project:

SOC 2 Certification Process

1. GAP ASSESSMENT

2. IMPLEMENTATION & EVIDENCE COLLECTION

3. AUDIT

Prebuilt Guidance:
-Policies & Controls
-Implementation help
-Mapped to SOC 2
-Gap assessment dashboard

Project Management
-Project progress dashboard
-Task assignment & tracking
-Collaboration
-Jira Integration

Audit & Certification
-Auditor verification
-Evidence repository
-Collaboration
-Official certificate to share with clients
